

# WHERE DO OUR WORST PROBLEMS ACTUALLY BEGIN?

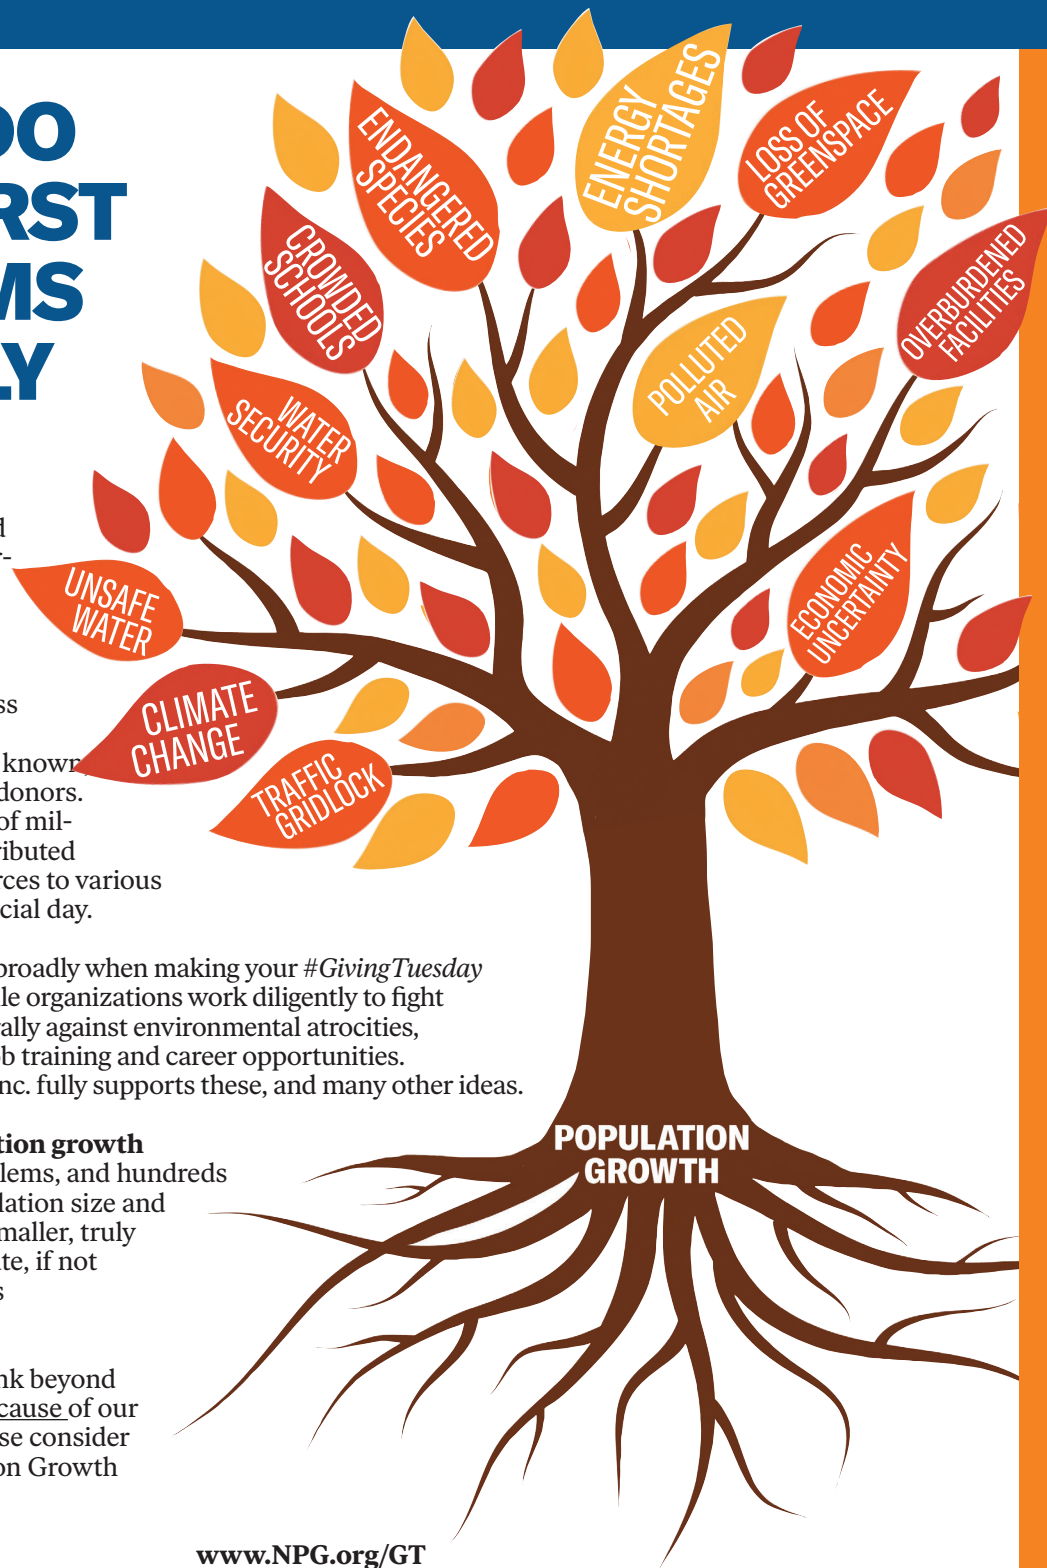

*#GivingTuesday*, first launched in 2012, was created to encourage people to simply “do good.” Building on the enormously popular start of the holiday shopping season — Black Friday, Small-Business Saturday, Cyber Monday —

*#GivingTuesday* is now widely known, particularly among nonprofit donors. Since its inception, hundreds of millions of individuals have contributed their time and financial resources to various organizations on this very special day.

This year, we ask you to think broadly when making your *#GivingTuesday* contributions. Many worthwhile organizations work diligently to fight hunger and homelessness, to rally against environmental atrocities, and to mobilize for access to job training and career opportunities. Negative Population Growth, Inc. fully supports these, and many other ideas.

The hard truth is that **population growth** is the **root cause** of these problems, and hundreds of others. Reducing U.S. population size and growth to ultimately reach a smaller, truly sustainable level would alleviate, if not eliminate, most of our nation’s most pressing challenges.

We respectfully ask you to think beyond the obvious, think of the **root cause** of our nation’s problems, and to please consider supporting Negative Population Growth this *#GivingTuesday*.

Negative Population Growth, Inc., the nation’s premier organization devoted to the study of U.S. population issues, was founded in 1972. Our primary purpose is to educate the American public, particularly our nation’s elected leaders, regarding the need for policies designed to slow, halt, and eventually reverse population growth to protect our environment and quality of life for future generations. NPG recommends an end to illegal immigration, a reduction in legal immigration to no more than 200,000 admissions each year, and the ideal of the two-child family.
