

# AMERICA'S POPULATION NOW STANDS AT 335 MILLION PEOPLE

There could be tens of millions more people in your lifetime!

The 2020 Census found that the U.S. had a population of 331 million people on April 1, 2020. Now, in 2023, that number has grown to 335 million. If these trends continue you may see a population of 500 million or more in your lifetime.

Many foolishly celebrate the addition of more people as a symbol that our nation is strong and prosperous. However, all Americans – especially our younger generations – should be concerned about the overcrowded nation of tomorrow.

How will we feed, clothe, house, and employ so many people? Can our environment sustain them? Can we enjoy the same quality of life in the future if we are competing for limited resources such as water and energy?

Population growth impacts everyone's life every day. The harmful consequences should concern each of us. It is time for us to slow our population growth, and then work together toward a sustainable national population size, far smaller than what we see today.

It's your future...  
What you do matters.

THINK ABOUT THESE PROBLEMS...

Development and Expansion

Can you see the impact of increased population in your daily life?

Loss of Valuable Farmland

Will America be able to help feed the world in the future?

Limited Water Supplies

Can America's water supplies sustain a larger population?

Energy Shortages

How much will we disrupt our nation's fragile environment to fuel our future?

Destruction of Wildlife Habitat

Isn't it our duty to protect our planet for all living creatures?

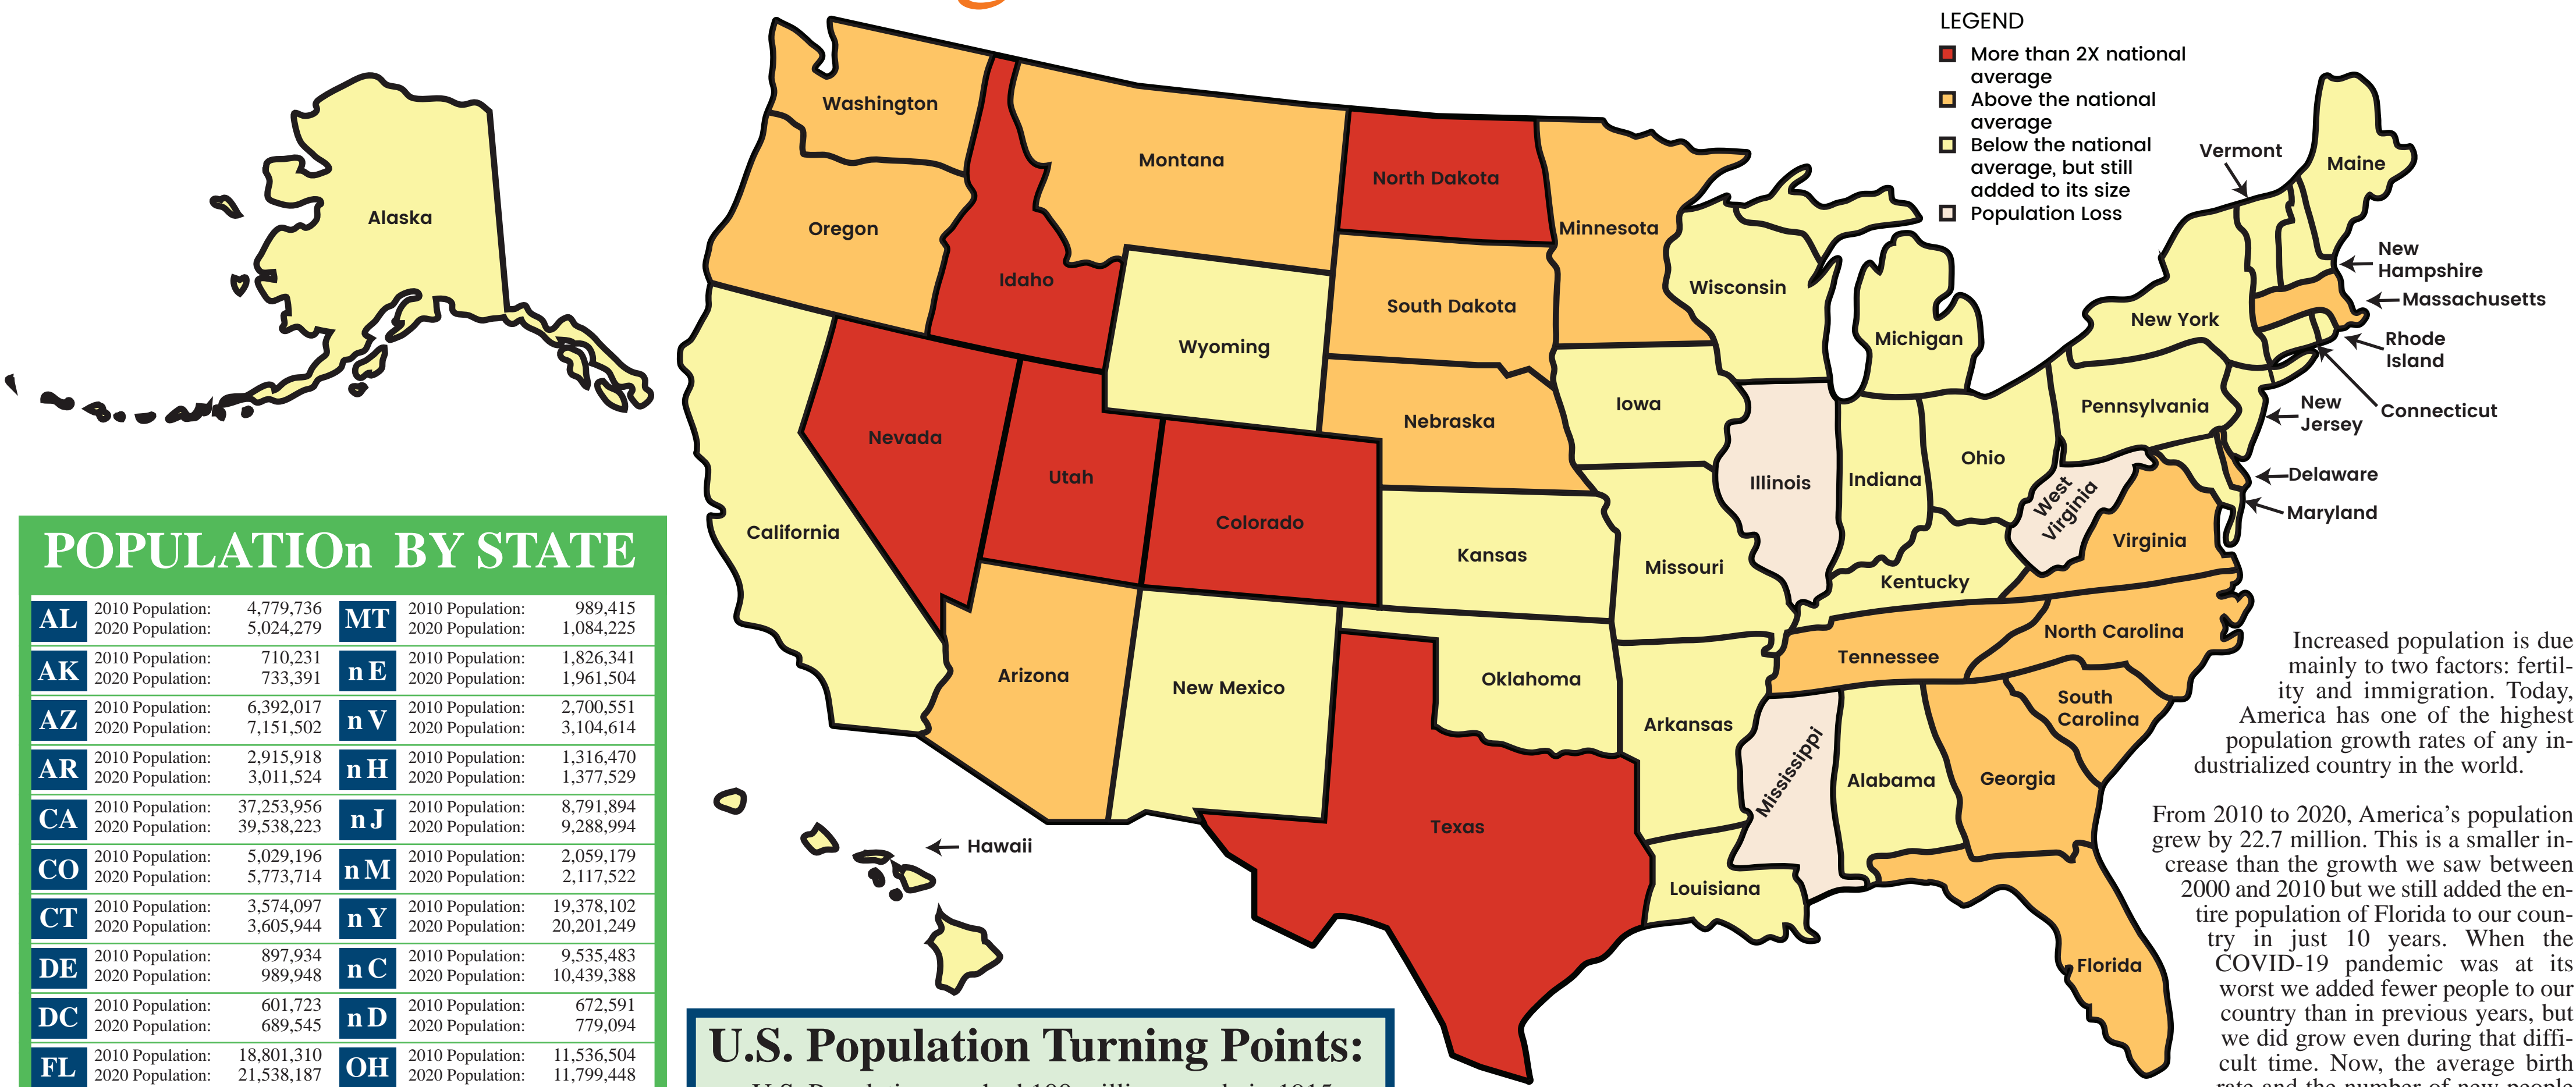

Air Pollution

What are the major sources of air pollution in your community today?

## POPULATION GROWTH RATE BY STATE 2010 - 2020

National Average Rate of Growth was 7.4%

U.S. Population Turning Points:	
• U.S. Population reached 100 million people in 1915.	
• In 1967, U.S. population passes the 200 million mark.	
• Our population exceeded 300 million in 2006.	
• By about 2058, we are expected to grow to 400 million!	
15 Most Populated States 2020 Census Results

California	254
Illinois	231
Hawaii	227
Virginia	219
North Carolina	215

Increased population is due mainly to two factors: fertility and immigration. Today, America has one of the highest population growth rates of any industrialized country in the world.

From 2010 to 2020, America's population grew by 22.7 million. This is a smaller increase than the growth we saw between 2000 and 2010 but we still added the entire population of Florida to our country in just 10 years. When the COVID-19 pandemic was at its worst we added fewer people to our country than in previous years, but we did grow even during that difficult time. Now, the average birth rate and the number of new people coming into this country are both returning to pre-pandemic levels.

Estimates are that nearly 90% of the United States' projected population growth will be the result of new people arriving in our country and the children they will have.

Eight states – Colorado, Florida, Idaho, Nevada, North Dakota, Utah, Texas, and Washington – currently have population growth rates that will see their population double in less than 50 years.

Only China and India have populations greater than ours. If America is going to remain a global leader, as well as a prosperous country, we must set an example by stopping and eventually reversing our population growth.

If you were to count all 335 million people in the United States – taking one second per person – it would take over 10 years.

If you lined up all 335 million residents of the United States back-to-back (with each person taking up 12 inches) the line would stretch for over 60,000 miles. That's enough to circle the earth at the equator more than twice or cover the distance between New York City and Los Angeles 21 times!

This educational poster has been provided by the thousands of Negative Population Growth (NPG) members who are working together to stabilize America's population at a sustainable level, far smaller than today's, so that we will leave a prosperous and livable nation to future generations. Negative Population Growth is a 501(c)(3) non-profit organization.
