New NPG Forum Paper Reveals Rising Population Growth's Strain on Healthcare Infrastructure How Immigration Policies Worsen U.S. Healthcare Infrastructure

Alexandria, VA, (October 30, 2024): Negative Population Growth, Inc. has published a new Forum paper written by Nathaniel Gronewold. Titled "[*Too Many People Chasing Too Few Healthcare Providers: How Population Growth Can Make You Sick*](#)," the paper highlights critical concerns regarding the impact of rapid population growth on the U.S. healthcare system.

Gronewold argues that federal policies promoting population expansion, particularly through immigration, have placed substantial pressure on healthcare infrastructures nationwide. He provides a poignant analysis of how these policies have led to overcrowding, increased healthcare costs, and longer wait times for medical attention.

"Federal immigration policy is pushing the nation's population higher and higher," Gronewold states. "It has caused Springfield's population to explode in three years, with housing costs soaring and the city's healthcare infrastructure under immense strain. These concerns echo those heard in Canada and the United Kingdom."

The International Monetary Fund (IMF) reports that U.S. hospitals have been able to double their prices since the 1980s, leading to the highest healthcare costs in the world. Gronewold calls attention to policies encouraging the rising demand for healthcare while limiting the expansion of doctors, hospitals, and health practitioners.

"My fears are that the increasingly massive, increasingly crowded population of the United States is increasingly making our country quite an unpleasant place to live in," Gronewold adds. "The collapsing birth rate is the surest sign that overpopulation is making life worse in the United States."

Gronewold emphasizes the necessity of addressing these issues head-on, urging a reevaluation of current population growth policies. "We must work together to slow, halt, and eventually reverse population growth in the United States, specifically immigrant-driven population growth," he asserts.

This publication challenges policymakers, healthcare professionals, environmentalists, and activists to engage in meaningful discussions about population growth and its impact on healthcare. It serves as a call to action to address a pressing issue that affects the quality of life for American families and sustainable communities coast to coast.

Since 1972, NPG has worked to educate both the public and policy leaders about the impacts of overpopulation. With a steadfast commitment to reducing population growth to achieve a sustainable balance with our environmental resources, NPG continues to be a leading voice of reason in a world often driven by the pursuit of perpetual growth. We do not simply identify the problems – we propose solutions.
